EXHIBITION

In computer science, students used a combination of HTML and CSS languages to design and code a website from scratch to serve as a digital portfolio.

In Humanities 10, students wrote poetry, created mixed-media art, and drew upon primary and secondary research to explore how technology has shaped and how it continues to shape our human experience.

In World History, sophomores worked as part of a "time traveling" group, going back in time and researching an Industrial Revolution era technology that has influenced our world today.
